JURNAL/TP

1. Soal 1

Pertanyaan:

a. [2 Point] Lakukan hash SHA256, SHA512 dan MD5 untuk file /etc/passwd.

Berapa nilai

hash dari file /etc/passwd? Screenshot nilai hash dari file tersebut.

b. [2 Point] Buatlah file bernama test_0.txt pada folder /home/praktikan. Isi file tersebut isi

yang ada di file /etc/passwd (copy paste isi file /etc/passwd ke test_0.txt)

c. [2 Point] Lakukan hash SHA256, SHA512 dan MD5 untuk file test_0.txt. Berapa nilai

hash dari file test_0.txt? Screenshot nilai hash dari file test_0.txt.

d. [2 Point] Rename file test_0.txt menjadi file _0.txt. Lakukan hash SHA256, SHA512 dan

MD5 untuk file _0.txt. Berapa nilai hash file _0.txt? Screenshot nilai hash dari file _0.txt.

e. [2 Point] Apa hasil pengamatan Anda? File apa saja yang mempunyai hash yang sama?

Jelaskan!

Jawaban:

```
shant@shant:~$ cd /home/praktikan
shant@shant:~/praktikan$ cp /etc/passwd test_0.txt
shant@shant:~/praktikan$ sha256sum /etc/passwd
617c2f8d4f36e8c3b0f48c28a1c5d1 /etc/passwd
shant@shant:~/praktikan$ sha512sum /etc/passwd
9c7253b0e6f58b4f0b01b96054b0a0b7fa /etc/passwd
shant@shant:~/praktikan$ md5sum /etc/passwd
Command 'sha256' not found, but can be installed with
sudo apt install hashcat
shant@shant:~/praktikan$ sha256sum test_0.txt
617c2f8d4f36e8c3b0f48c28a1c5d1 test_0.txt
shant@shant:~/praktikan$ sha512sum test_0.txt
9c7253b0e6f58b4f0b01b96054b0a0b7fa test_0.txt
shant@shant:~/praktikan$ md5sum test_0.txt
f7b79d42763d88044b1b0481b0d1159188373a1b08053a0b5073a623b04ef3ba72a7801e993d773c73a6a70c4b6599022ac03648f105c9642b /etc/passwd
shant@shant:~/praktikan$ mv test_0.txt _0.txt
shant@shant:~/praktikan$ sha256sum _0.txt
617c2f8d4f36e8c3b0f48c28a1c5d1 _0.txt
shant@shant:~/praktikan$ sha512sum _0.txt
9c7253b0e6f58b4f0b01b96054b0a0b7fa _0.txt
shant@shant:~/praktikan$ md5sum _0.txt
f7b79d42763d88044b1b0481b0d1159188373a1b08053a0b5073a623b04ef3ba72a7801e993d773c73a6a70c4b6599022ac03648f105c9642b /etc/passwd
shant@shant:~/praktikan$
```

File yang memiliki hash sama adalah:

- /etc/passwd
- test_0.txt (sebelum diubah nama jadi file _0.txt)

- hash TIDAK berubah
 Karena isi file tidak berubah, hanya nama file.

- a. **[3 Point]** Download file bernama test_1.txt di link ini tiny.cc/test1_txt hash test_1.txt? Screenshot nilai hash dari file test_1.txt.
- c. **[3 Point]** Hapuslah titik diakhir file test_1.txt tersebut, simpan file tersebut!
- d. **[3 Point]** Lakukan hash dari SHA256, SHA512 dan MD5. Screenshot nilai hash dari file test_1.txt.
- e. **[3 Point]** Apa analisis (hasil pengamatan) Anda mengenai hal tersebut! Apakah nilai hash sama?

- a. **[3 Point]** Download file bernama test_1.doc di link ini tiny.cc/test1_doc
- b. **[3 Point]** Lakukan hash SHA256, SHA512 dan MD5 untuk file test_1.doc. Screenshot nilai hash dari file test_1.doc.
- c. Buka kembali file test_1.doc. Lakukan hal ini:
 - i. **[3 Point]** Ketik abcdef. Save test_1.doc
 - ii. **[3 Point]** Hapus abcdef. Save test_1.doc
- d. **[3 Point]** Lakukan hash SHA256, SHA512 dan MD5 untuk file test_1.doc. Screenshot nilai

e. **[3 Point]** Hasil pengamatan apa yang diperoleh? Jelaskan alasannya!

Opsi a dan b:

[illegible][illegible]

Nilai hash sebelum dan sesudah perubahan file berubah secara signifikan, meskipun perubahan isi hanya berupa penambahan lalu penghapusan teks kecil (abcdef).

4. Soal 4

WARNING: INSTALL ENCFs!

sudo apt-get update

sudo apt-get -y install encfs

Setelah terinstall silakan melanjutkan pengerjaan jurnal.

a. **[5 Point]** Jalankan perintah berikut:

encfs ~/folder_anda/folder_terenkripsi ~/folder_anda/folder_normal

Pilih y (enter), pilih y (enter), enter, kemudian buatlah password. **Ingatlah password yang dibuat.** Setelah selesai, perhatikan bahwa telah muncul folder bernama folder_normal dan folder_terenkripsi.

b. **[5 Point]** Copy dua atau tiga buah file (file apa saja) ke folder_normal. Amati dan tulis hasil observasi Anda pada folder_terenkripsi!

c. **[5 Point]** Hapus salah satu file (bebas) pada folder_terenkripsi. Amati dan tulis hasil observasi Anda pada folder_normal!

d. **[5 Point]** Lakukan umount dengan perintah:

Fusermount -u ~/folder_anda/folder_normal

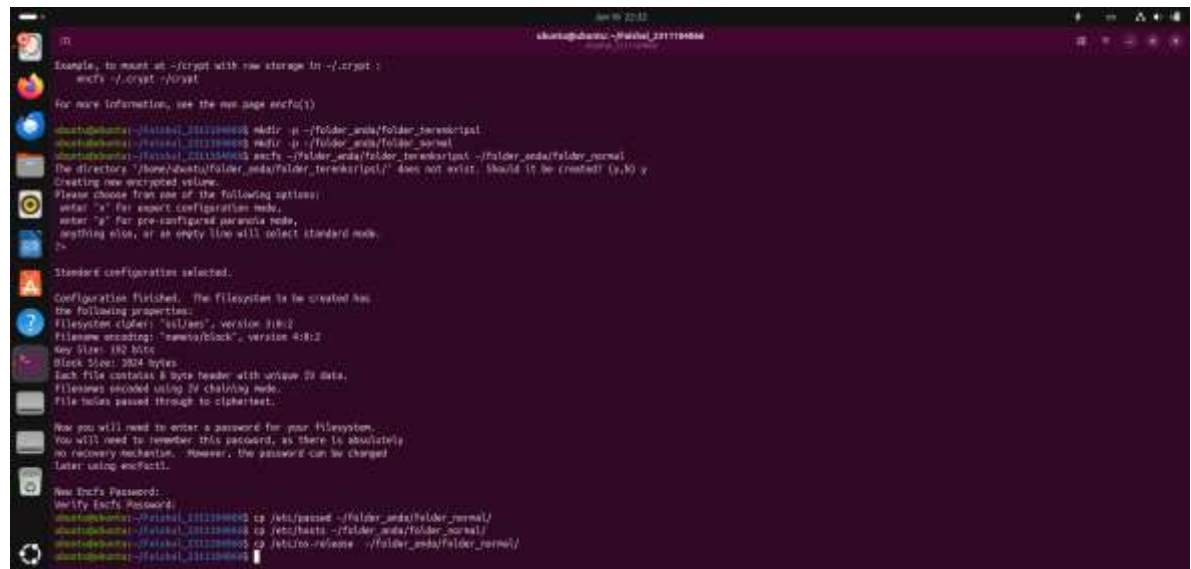

Amati dan tulis hasil observasi Anda pada folder_normal dan folder_terenkripsi

e. **[7 Point]** Buatlah folder baru bernama folder_sembarang. Lakukan perintah berikut ini:

encfs ~/folder_anda/folder_terenkripsi ~/folder_anda/folder_sembarang

Amati dan tulis hasil observasi Anda!

Jawaban:

```
ubuntu@ubuntu:~$ sudo apt-get update
Example, to mount at ~/crypt with raw storage in ~/.crypt:
encfs ~/.crypt ~/crypt

For more information, see the man page encfs(1)

ubuntu@ubuntu:~$ sudo mkdir -p ~/folder_anda/folder_terenkripsi
ubuntu@ubuntu:~$ sudo mkdir -p ~/folder_anda/folder_normal
ubuntu@ubuntu:~$ sudo encfs ~/folder_anda/folder_terenkripsi ~/folder_anda/folder_normal
The directory "/home/ubuntu/folder_anda/folder_terenkripsi/" does not exist. Should it be created (y,n)?
Creating new encrypted volume.
Please choose from one of the following options:
enter 's' for expert configuration mode,
enter 'p' for pre-configured password mode,
anything else, or an empty line will select standard mode.
>

Standard configuration selected.
Configuration finished. The filesystem to be created has
the following properties:
Filesystem cipher: "nil/ao", version 31812
Filesystem encoding: "name/block", version 41812
Key Size: 160 bits
Block Size: 3274 bytes
Each file contains a byte header with unique ID data.
Filenames encoded using IV chaining mode.
File holes passed through to ciphertext.

Now you will need to enter a password for your filesystem.
You will need to remember this password, as there is absolutely
no recovery mechanism. However, the password can be changed
later using encfsctl.

New Encfs Password:
Verify Encfs Password:
ubuntu@ubuntu:~$ cd ~/folder_anda/folder_normal/
ubuntu@ubuntu:~$ cp /etc/passwd ~/folder_anda/folder_normal/
ubuntu@ubuntu:~$ cp /etc/bash ~/folder_anda/folder_normal/
ubuntu@ubuntu:~$ cd ~/folder_anda/folder_normal/
ubuntu@ubuntu:~$ cd ~/folder_anda/folder_normal/
```
